1 PROBLEM GATE 2009 (CS), Q.21

An unbalanced dice (with 6 faces, numbered from 1 to 6) is thrown. The probability that the face value is odd is 90% of the probability that the face value is even. The probability of getting any even numbered face is the same. If the probability that the face is even given that it is greater than 3 is 0.75, which one of the following options is closest to the probability that the face value exceeds 3?

- (A) 0.453
- (B) 0.468
- (C) 0.485
- (D) 0.492

2 SOLUTION

Random variable	Corresponding event	Possible values
X	Face value is EVEN	2, 4, 6
Y	Face value is ODD	1, 3, 5

\Rightarrow X and Y are independent.

To find: probability that the face value exceeds 3.

Sum of all probabilities = 1

$$\Rightarrow \Pr(X) + \Pr(Y) = 1 \quad (1)$$

Given probability that the face value is odd is 90% of the probability that the face value is even

$$\Pr(Y) = 0.9 \Pr(X) \quad (2)$$

$$\Rightarrow \Pr(X) \times (1 + 0.9) = 1 \quad (3)$$

$$\Pr(X) = \frac{10}{19} \Rightarrow \Pr(Y) = \frac{9}{19} \quad (4)$$

Given: X = 2, X = 4, X = 6 are EQUALLY likely

$$\Pr(X = 2) = \Pr(X = 4) = \Pr(X = 6) \quad (5)$$

$$= \frac{\Pr(X)}{3} = \frac{10}{57} \quad (6)$$

$$\text{Given: } \Pr(X \mid (X > 3) + (Y > 3)) = 0.75 \quad (7)$$

$$\frac{\Pr(X = 4) + \Pr(X = 6)}{\Pr(X = 4) + \Pr(Y = 5) + \Pr(X = 6)} = 0.75 \quad (8)$$

$$\Rightarrow \text{From (5) and (8): } \Pr(Y = 5) = \frac{20}{171} \quad (9)$$

$$\Pr((X > 3) + (Y > 3)) \quad (10)$$

$$= \Pr(X > 3) + \Pr(Y > 3) \quad (11)$$

$$= \Pr(X = 4) + \Pr(Y = 5) + \Pr(X = 6) \quad (12)$$

$$= \frac{10}{57} + \frac{10}{57} + \frac{20}{171} = \frac{80}{171} \quad (13)$$

$$= 0.46755 \approx 0.468 \quad (14)$$

$$\Pr(\text{Face value} > 3) = 0.468$$

Option B is correct
